2                   **ABSTRACT OF THE DISCLOSURE**

3           An apparatus for drawing down a fluid level in a wellbore. The apparatus comprises a  
4   first tubular disposed within the wellbore so that a wellbore annulus is formed. The apparatus  
5   further includes an annular nozzle operatively attached to the first tubular, and wherein the  
6   annular nozzle comprises: an annular adapter; and, a suction tube that extends from the annular  
7   member into an inner portion of the first tubular. The apparatus further comprises a second  
8   tubular concentrically disposed within the first tubular so that a micro annulus is formed therein.  
9   The apparatus may further contain a jetting device for delivering an injected medium injected from  
10   the micro annulus into the wellbore annulus, and a stabilizer that stabilizes the second tubular  
11   within the first tubular. A method of drawing down a fluid level is also disclosed.
